

A bright, modern living room with a woman relaxing on a light-colored sofa. Large windows offer a view of a city. The room features a built-in entertainment system, including a wall-mounted screen and speakers. The text "The built-in entertainment and control system that enhances any home" is displayed in red on the wall.

The built-in
entertainment
and control system
that enhances
any home

Enjoy music and movies around your home, at the touch of a button.

What is multi-room entertainment?

Everything you'll
need is at your
fingertips...

Imagine the whole family being able to enjoy and control their favourite music, in any room throughout the home.

A multi-room entertainment system will turn this dream into reality, with the freedom and flexibility to access and control audio and video equipment independently in every room - think of it simply as central heating for pictures and sound.

Everything you'll need is at your fingertips, via stylish, intuitive keypads or remote controls, while exceptional high performance audio is delivered through discreet speakers.

Why Systemline Modular?

Superb high fidelity music anywhere you want it, for everyone to enjoy, in the living room, dining room, kitchen, bedrooms and even the bathroom - all completely discreet.

Naturally, Systemline Modular offers complete flexibility, allowing you to tailor a system precisely to your needs, right down to the colour of the keypad surround. Reassuringly, should your requirements change, your system can be upgraded in the future.

Needless to say, Systemline Modular is designed to integrate with your existing hi-fi stereo equipment. Additionally, where specified, you'll have the freedom to quickly connect other audio equipment as and when you need - such as a computer, MP3 player or games console, using a local input.

Once you've experienced Systemline Modular in your home, anything less will be a compromise.

Systemline
Modular offers
complete
flexibility,
allowing you to
tailor a system
precisely to meet
your needs

Systemline is Europe's leading designer/manufacturer of high quality multi-room entertainment systems for the home.

We have been manufacturing cutting edge multi-room systems since 1987. Today we have 1000s of systems installed across Europe and enjoy an enviable reputation for outstanding performance and reliability.

All 'Systemline Approved Installers' have attended comprehensive training courses at our training academy and are fully qualified to help you design and perfectly install Systemline Modular into your home.

The central network hub can be hidden away

Making the Right Choice

The following pages aim to highlight the available packages, together with features of the Systemline Modular range and focus on the control and accessibility potential of this exceptional multi-room entertainment system.

The basis of any Modular system starts with the central network hub, usually hidden away in a cupboard (or similar), housing the sophisticated technology that powers and controls the system. This is the starting point for the concealed cabling that delivers perfect audio and images throughout the home - at the touch of a button, plus distribution of TV, data (home network and broadband services) and telephone.

Systemline Homenet provides the central network hub for the following services to be distributed around the home:

Music

Internet

Movies

Telephone

Security

Packages

Bronze

Same sound in any room

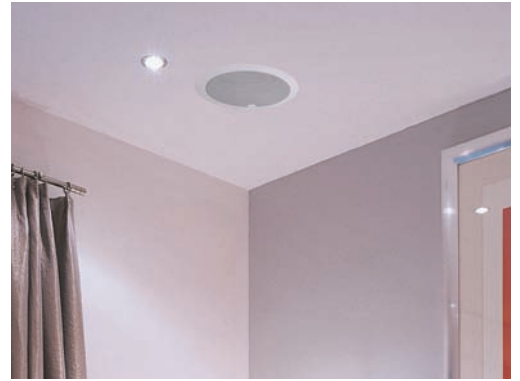

Silver

Different sound in any room

Gold

Different sound & pictures in any room

Elegant on-wall amplified speakers

Simple Elegance

Discreet in-ceiling or on-wall speakers, combined with stylish keypads, result in virtually no intrusion into your living space. Therefore no more stacks of unsightly hi-fi separate boxes, room cluttering speakers and irritating cables.

Systemline Modular offers a unique collection of keypads including the colour TouchScreen - which epitomise elegance and simplicity, for effortless instantaneous control. Each keypad is available with a selection of finishes to complement your individual rooms.

Our typical recommendation for most rooms is a pair of on-wall or in-ceiling speakers. Single speakers are recommended in smaller rooms such as bathrooms.

Infrared speakers are ideal for rooms where keypads are not required. The IR function allows full control of your system and connected equipment using the ultra stylish, fully functional remote control.

Platinum

Complete home automation

Grow with your Family

Whether you choose the basic audio distribution system or opt for our flagship TouchScreen controls, once the cabling is in place the system is completely flexible. If your requirements change in the future, it can be conveniently upgraded without any major interference to your décor.

Systemline
doesn't merely
fulfil your needs,
it will exceed
your expectations

Child's Play

Simple push button keypads through to touchscreen controls, whatever system you choose, Systemline Modular is easy to use and lifestyle enhancing for all the family.

Systemline doesn't merely fulfil your needs, it will exceed your expectations and provide a truly luxurious multi-room entertainment experience. You'll want to use it from the second you wake, until the moment you rest your head. Once you've enjoyed the delight of Systemline Modular, you'll wonder how you ever lived without it.

Control Your World

Systemline Modular is a fantastic multi-room audio and video system, but it also offers unrivalled versatility and flexibility to perfectly integrate with SystemNet, our advanced level product - opening a whole new world of control and home automation options.

iPort®

The world's first in-wall music system for the iPod®. Provides access to your favourite music by album, artist and playlist, or your favourite movies, podcasts or photographs stored on your docked iPod®.

Systemline MusicServer

Intuitive control of this 160GB 'music library' with instant access to your favourite music through album, artist or playlist.

Lutron

Scene setting for lighting, plus blind and curtain controls. Lutron's innovations have transformed the world of lighting controls and today continue to lead the way in dimming innovation and quality.

KNX (EIB) Heating & Lighting

EIB (European Installation Bus) is a standard used for home automation to control numerous electrical devices in individual rooms or throughout the home. For example in-room temperature control or for scene setting of lighting, both in-room or wholehouse.

SKY*

Select your favourite channel from the Sky TV guide. When listening to radio stations, view real-time information feedback from the show.

*Available from summer 2008

The Systemline MusicServer

Optional Extras

Systemline Modular is designed to integrate seamlessly with your existing audio and video equipment - with few exceptions. Featured below are some upgrade ideas for your consideration, to provide maximum enjoyment of multi-room entertainment and realise Systemline Modular's full potential.

iPort®

Simply place your iPod® in the in-wall iPort® dock and enjoy your favourite music through discreet speakers. The iPod® can be accessed from different rooms around your home.

Systemline MusicServer

This superb, easy-to-use 160GB 'audio library' provides instant access to your chosen music - organised and categorised just the way you like it. Additionally, via its built-in Internet Radio you can listen to stations from around the world. The MusicServer is truly for the whole family - it can be listened to simultaneously and independently in up to three rooms.

Aquavision Bathroom TV

For the ultimate in luxury be sure to add an Aquavision television. This screen is safely flush-mounted into your bathroom, allowing enjoyment of your favourite soap or movie whilst relaxing in the bath. Pin sharp and crystal clear, Aquavision televisions are available from 19" to 40" screens and supplied HD ready.

Lighting

Complete your system by including lighting control. At the touch of a button you can select a pre-determined setting to suit the current room use, or simply just your mood.

Plug and Play

Wall mounted local input plates can be added to any room - simply connect your MP3 player, games console or computer directly to Systemline Modular for the whole family to enjoy!

audio and video
equipment

A full range of high performance CD players, DVD players and radios is available.

Frequently Asked Questions

How much does it cost?

Your sales negotiator will provide a comprehensive price list.

How will I know how my system works?

Whilst the installer will install most of your system during the build stages of your new home, the final commissioning is not done until you have moved in. Your developer will advise the installer on when that is. You will be given a full demonstration of the system and asked to sign a hand over certificate to confirm you are happy with your installation.

Energy Efficient

Systemline is actively involved in protecting the environment for future generations. We all have a small part to play and Systemline, through its products, enables its customers to change their lifestyles.

Systemline Modular is also designed to be extremely energy efficient. The amplifiers work to up to 85% efficiency and the patented switched mode power supply is typically 94% efficient. This level of efficiency is almost unheard of in other consumer electronic devices.

A Systemline Modular system fully operational in eight rooms, will consume less power than a 100W light bulb. The less energy we consume, the better for the environment.

Can I use my existing audio and video equipment?

Modular is designed as a 'plug and play' system which is compatible with almost any equipment with a line out and preferably a remote control, such as a CD player, Tuner, DVD player and satellite. Plug in and immediately hear / see and control the system throughout your home.

How many pieces of audio equipment can be plugged in?

The single source system allows one centrally located piece of equipment and local inputs in every room. The multi source system allows up to six audio sources and six video components plus local inputs.

A full range of high performance CD players, DVD players and radios is available.

What cables will I need to integrate my existing equipment?

Cables are supplied for a variety of main source inputs. For local inputs such as iPod®/MP3 players, games consoles and PCs there is a cable pack available to suit most requirements.

Can I distribute a local input to other Modular rooms?

The local input can only be used in its dedicated room.

Can the system form part of a surround sound set-up?

Yes, Modular is unique and can be used for home theatre and multi-room entertainment.

Is there a warranty?

Your system is provided with a two year warranty from date of commissioning.
